Technical Data Sheet: Surgical Face - Type IIR

Product Description

The **BLUBUD MASKS** IIR Surgical Masks are Composed of 3 layers of ultra-soft, splash-resistant PP nonwoven fabric (TNT). This type of masks complies with the highest performance requirements Bacterial filtration efficiency (BFE) $\geq 98\%$ For Surgical masks (Type IIR) and can be used in a medical environment. All used materials are irritant free and odourless. Soft flat elastic ear-loop hold the mask securely and comfortable to the face and allow for an easy removal. Adapting the integrated nose bar to the nose silhouette seals off upper face and eye area. Our **BLUBUD MASKS** are designed, manufactured and certified in India with Japanese materials.

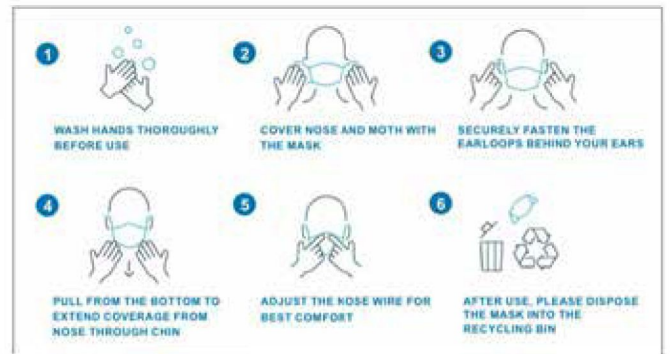

Usage

The **BLUBUD MASKS** Type IIR surgical masks are a single use product and should be replaced after wearing up 8 hours. This mask is medical use, it is not a personal protective equipment and it is non sterile. Not suitable for children under 3 years of age. The mask protects other people around from spills of droplets, infections and contaminating liquids by the wearer. The two external layers of the mask are made of the same protective material, and the mask can be worn safely both ways. To improve breathability and fit, and to avoid irritation on the cheeks it is recommended that the mask is worn with the side of the soft flat elastic welding on the mask facing outside. The masks should be used within 3 years from the manufacturing date indicated on the packing. Store masks in a cool and dry place. Dispose safely after use. This product can be thermally recycled or disposed of in a controlled landfill without releasing toxic substances.
